

Nebula Genomics

How incentives are given?

1. A user answers the survey questions and gets credit points. The user can use these credit points in exchange of free genome sequencing.
2. The survey questions help to analyse the user personality and health data.
3. The initial survey is to obtain basic user information.
4. Other surveys gather other data related to user that can be helpful in research.

Please configure your data privacy preferences.

Your genomic and health data are yours, and always will be.

Privacy

All data is 256-bit encrypted.

Anonymity

Your genomic data is anonymized and can't be linked to you by researchers.

Transparency

We use blockchain technology to share and store your consent and provide better security.

Control

You decide who can access your data and for which studies it can be used.

In order to help protect your privacy and make Nebula a safe platform for our users and researchers, please select your desired data settings.

☐ I want to share my genomic data with all approved partners

Approved partners will be able to use your genomic data in their research without asking you first. You will still be compensated for each use.

☒ I want to approve or deny requests for my genomic data

If researchers want to use your genomic data for a study, they need to ask your permission first. You will be compensated for any studies your data gets used for.

☐ I don't want to share my genomic data

You don't want your genomic data available for research purposes.

Save Privacy Preference

Health and Family History.

The following questionnaire is optional, however answering surveys helps contribute to medical research and improves our reporting.

Please Answer Truthfully

Truthful answers help us match you with relevant research institutions to get you sequenced faster.

Additionally, this data can be verified via sequencing results to ensure quality.

Your Information Is Secure

All data is 128-bit encrypted and never seen by anyone unless you allow it.
